Stanford WebBase components and applications

Junghoo Cho, Hector Garcia-Molina, Taher Haveliwala, Wang Lam, Andreas Paepcke, Sriram Raghavan, Gary Wesley

May 2006 ACM Transactions on Internet Technology (TOIT), Volume 6 Issue 2

Publisher: ACM Press

Full text available: pdf(609.18 KB) Additional Information: full citation, abstract, references, index terms.

We describe the design and performance of WebBase, a tool for Web research. The system includes a highly customizable crawler, a repository for collected Web pages, an indexer for both text and link-related page features, and a high-speed content distribution facility. The distribution module enables researchers world-wide to retrieve pages from WebBase, and stream them across the Internet at high speed. The advantage for the researchers is that they need not all crawl the Web before beginning t ...

Topical locality in the Web

Brian D. Davison

July 2000 Proceedings of the 23rd annual international ACM SIGIR conference on Research and development in information retrieval SIGIR '00

Publisher: ACM Press

Full text available: pdf(771.77 KB)

Additional Information: full citation, abstract, references, citings, index terms

Most web pages are linked to others with related content. This idea, combined with another that says that text in, and possibly around, HTML anchors describe the pages to which they point, is the foundation for a usable World-Wide Web. In this paper, we examine to what extent these ideas hold by empirically testing whether topical locality mirrors spatial locality of pages on the Web. In particular, we find that the likelihood of linked pages having similar textual content to be ...

² Shape-based retrieval and analysis of 3D models

August 2004 ACM SIGGRAPH 2004 Course Notes SIGGRAPH '04

Publisher: ACM Press

Full text available: pdf(12.56 MB) Additional Information: full citation, abstract

Large repositories of 3D data are rapidly becoming available in several fields, including mechanical CAD, molecular biology, and computer graphics. As the number of 3D models grows, there is an increasing need for computer algorithms to help people find the interesting ones and discover relationships between them. Unfortunately, traditional text-based search techniques are not always effective for 3D models, especially when queries are geometric in nature (e.g., find me objects that fit into thi ...

Information storage and retrieval: a survey and functional description

Jack Minker

September 1977 ACM SIGIR Forum, Volume 12 Issue 2

Publisher: ACM Press

Full text available: pdf(5.14 MB)

Additional Information: full citation, abstract, references, citings

Information Storage and Retrieval (IS&R) encompasses a broad scope of topics ranging from basic techniques for accessing data to sophisticated approaches for the analysis of natural language text and the deduction of information. Within the field, three general areas of investigation can be distinguished not only by their subject matter but also by the types of individuals presently interested in them:(1) Document retrieval,(2). Generalized data management, and(3) Question-answering. A functional ...

Representing internet streaming media metadata using MPEG-7 multimedia

description schemes

Eric Rehm

November 2000 Proceedings of the 2000 ACM workshops on Multimedia MULTIMEDIA

Publisher: ACM Press

Full text available: pdf(603.51 KB) Additional Information: full citation, abstract, references, index terms

Singingfish.com uses MPEG-7 description schemes to model the metadata characteristics of Internet streaming media. Further it has used MPEG-7 description schemes as the basis for a number of internal experiments, processes, as well as interchange with commercial content partners. This paper describes our selection of description schemes from the MPEG-7 Multimedia Description Schemes (MDS) Working Drafts, their ability (or lack thereof) to represent Internet streaming media metadata, and our e ...

Hypertext versioning: Automatic generation of hypertext system repositories: a model

E. James Whitehead, Guozheng Ge, Kai Pan

August 2004 Proceedings of the fifteenth ACM conference on Hypertext and hypermedia HYPERTEXT '04

Publisher: ACM Press

Full text available: pdf(593.73 KB)

Additional Information: full citation, abstract, references, citings, index

In this paper, we present a model-driven methodology and toolset for automatic generation of hypertext system repositories. Our code generator, called Bamboo, is based on a Containment Modeling Framework (CMF) that uniformly describes data models for hypertext systems. CMF employs a lightweight modeling approach in which entities (system abstractions) and containment relationships are used to model hypertext system repositories. Given a description of a system repository data model using CMF, as ...

7 Searching the Web

Arvind Arasu, Junghoo Cho, Hector Garcia-Molina, Andreas Paepcke, Sriram Raghavan August 2001 ACM Transactions on Internet Technology (TOIT), Volume 1 Issue 1

Publisher: ACM Press

Full text available: pdf(319.98 KB)

Additional Information: full citation, abstract, references, citings, index terms, review

We offer an overview of current Web search engine design. After introducing a generic search engine architecture, we examine each engine component in turn. We cover crawling, local Web page storage, indexing, and the use of link analysis for boosting search performance. The most common design and implementation techniques for each of these components are presented. For this presentation we draw from the literature and from our own experimental search engine testbed. Emphasis is on introduci ...

8 Establishing the semantic web 1: SemTag and seeker: bootstrapping the semantic

web via automated semantic annotation

Stephen Dill, Nadav Eiron, David Gibson, Daniel Gruhl, R. Guha, Anant Jhingran, Tapas Kanungo, Sridhar Rajagopalan, Andrew Tomkins, John A. Tomlin, Jason Y. Zien May 2003 Proceedings of the 12th international conference on World Wide Web **WWW '03**

Publisher: ACM Press

Full text available: pdf(178.36 KB)

Additional Information: full citation, abstract, references, citings, index terms

This paper describes Seeker, a platform for large-scale text analytics, and SemTag, an application written on the platform to perform automated semantic tagging of large corpora. We apply SemTag to a collection of approximately 264 million web pages, and generate approximately 434 million automatically disambiguated semantic tags, published to the web as a label bureau providing metadata regarding the 434 million annotations. To our knowledge, this is the largest scale semantic tagging effort to ...

11 ANNOD: a navigator of natural-language organized (textual) data

Robert E. Williamson

June 1985 Proceedings of the 8th annual international ACM SIGIR conference on Research and development in information retrieval SIGIR '85

Publisher: ACM Press

Full text available: 19 pdf(830.49 KB) Additional Information: full citation, abstract, references

ANNOD is the name of a system developed at the National Library of Medicine (NLM), which implements a set of linguistic and empirical techniques that permit retrieval of natural language information in response to natural language queries. The system is based on Dr. Gerard Salton's SMART [1] document retrieval system and is presently implemented on a mini-computer as part of an Interactive TExt Management System, ITEMS.[2] Actual experience with retrieval of information from NLM's Hepatitis ...

12 Poster papers: Discovering informative content blocks from Web documents Shian-Hua Lin, Jan-Ming Ho

July 2002 Proceedings of the eighth ACM SIGKDD international conference on Knowledge discovery and data mining KDD '02

Publisher: ACM Press

Full text available: pdf(692.97 KB)

Additional Information: full citation, abstract, references, citings, index terms

In this paper, we propose a new approach to discover informative contents from a set of tabular documents (or Web pages) of a Web site. Our system, InfoDiscoverer, first partitions a page into several content blocks according to HTML tag <TABLE> in a Web page. Based on the occurrence of the features (terms) in the set of pages, it calculates entropy value of each feature. According to the entropy value of each feature in a content block, the entropy value of the block is defined. By analyz ...

13 Learning classifiers: Liveclassifier: creating hierarchical text classifiers through web

Chien-Chung Huang, Shui-Lung Chuang, Lee-Feng Chien

May 2004 Proceedings of the 13th international conference on World Wide Web WWW '04

Publisher: ACM Press

Additional Information: full citation, abstract, references, citings, index Full text available: pdf(244.58 KB) terms

Many Web information services utilize techniques of information extraction(IE) to collect important facts from the Web. To create more advanced services, one possible method is to discover thematic information from the collected facts through text classification. However, most conventional text classification techniques rely on manual-labelled corpora and are thus ill-suited to cooperate with Web information services with open domains. In this work, we present a system named LiveClassifier that ...

Keywords: text classification, topic hierarchy, web mining

14 Time and space: Time period directories: a metadata infrastructure for placing events

in temporal and geographic context

Vivien Petras, Ray R. Larson, Michael Buckland

June 2006 Proceedings of the 6th ACM/IEEE-CS joint conference on Digital libraries JCDL '06

Publisher: ACM Press

Full text available: pdf(418.63 KB) Additional Information: full citation, abstract, references, index terms

Metadata is ordinarily used to describe documents, but it can also constitute a form of infrastructure for access to networked resources and for traversal of those resources. One problematic area for access to digital library resources has been the search for time periods or events. If there is a capability to search for time, it is usually a date search - a standardized and precise form but unfortunately rarely used in common chronological expressions. For example, a user interested in the "Vie ...

15 Demo sessions: Demo group A: Query and search: SIREN: a similarity retrieval engine for complex data

Maria Camila N. Barioni, Humberto Razente, Agma Traina, Caetano Traina

September 2006 Proceedings of the 32nd international conference on Very large data bases - Volume 32 VLDB'2006

Publisher: VLDB Endowment

Full text available: pdf(748.60 KB) Additional Information: full citation, abstract, references, index terms

This paper presents a similarity retrieval engine - SIREN-that allows posing similarity queries in a relational DBMS using an extended syntax that adds the support for such type of queries in the SQL language. It discusses the main architecture of SIREN, describes some key features and provides a description of the demo.

16 PYTHIA-II: a knowledge/database system for managing performance data and

recommending scientific software

Elias N. Houstis, Ann C. Catlin, John R. Rice, Vassilios S. Verykios, Naren Ramakrishnan, Catherine E. Houstis

June 2000 ACM Transactions on Mathematical Software (TOMS), Volume 26 Issue 2

Publisher: ACM Press

Additional Information: full citation, abstract, references, citings, index Full text available: pdf(796.18 KB)

Often scientists need to locate appropriate software for their problems and then select from among many alternatives. We have previously proposed an approach for dealing with this task by processing performance data of the targeted software. This approach has been tested using a customized implementation referred to as PYTHIA. This experience made us realize the complexity of the algorithmic discovery of knowledge from performance data and of the management of these data together with the d ...

17 Reference model for DBMS standardization

March 1986 ACM SIGMOD Record, Volume 15 Issue 1

Publisher: ACM Press

Full text available: pdf(2.62 MB) Additional Information: full citation, abstract, citings, index terms This report proposes a Reference Model (RM) for database management system (DBMS) standardization. A Reference Model is a conceptual framework whose purpose is to divide standardization work into manageable pieces and to show at a general level how these pieces are related with each other. The proposed RM comprises a Data Mapping Control System (DMCS) that retrieves and stores application data, application schemas, and data dictionary schemas. This DMCS is bounded by two interfaces: the Data Lan ...

Web search 2: A study of relevance propagation for web search

Different from traditional information retrieval, both content and structure are critical to the success of Web information retrieval. In recent years, many relevance propagation techniques have been proposed to propagate content information between web pages through web structure to improve the performance of web search. In this paper, we first propose a generic relevance propagation framework, and then provide a comparison study on the effectiveness and efficiency of various representative pro ...

Charles W. Bachman reviews his career. Born during 1924 in Kansas, Bachman attended high school in East Lansing, Michigan before joining the Army Anti Aircraft Artillery Corp. with which he spent two years in the Southwest Pacific Theater, during World War II. After his discharge from the military, Bachman earned a B.Sc. in Mechanical Engineering in 1948, followed immediately by an M.Sc. in the same discipline, from the University of Pennsylvania. On graduation, he went to work for Do ...

20 Ranking and estimation: Estimating corpus size via queries

We consider the problem of estimating the size of a collection of documents using only a standard query interface. Our main idea is to construct an unbiased and low-variance estimator that can closely approximate the size of any set of documents defined by certain conditions, including that each document in the set must match at least one query from a uniformly sampleable query pool of known size, fixed in advance. Using this basic estimator, we propose two approaches to estimating corpus size. T ...
